The objects that surround us must help us live a more fully and happily life. That is just what we pursue with each of our creations. We design objects thinking about the happiness and comfort of the people who will be in contact with them.

Los objetos que nos rodean deben ayudarnos a conseguir vivir la vida de una forma más plena y feliz. Eso es justo lo que perseguimos con cada una de nuestras creaciones. Diseñamos objetos pensando en la felicidad y el confort de las personas que van a estar en contacto con ellos.

Neso

TECH / TÉCNICO

Neso is a magnetic track system that allows you to combine different types of luminaires for both general and accent lighting.

1

Choose your Neso track
Escoge tu carril Neso

2

Join them to build continuous lines
Únelos para construir líneas continuas

MECHANICAL CONNECTOR
For surface, pendant and recessed.
Para superficie, colgante y empotrado.

L AND T ACCESSORIES INNER AND OUTER CORNERS
For surface, pendant and recessed.
Para superficie, colgante y empotrado.

INPUT TERMINAL
Necessary for recessed track.
Necesario para carril empotrado.

3

Turn your Neso track surface into pendant
Convierte tu carril Neso superficie en colgante

4

Add luminaires to your Neso track
Añade luminarias a tu carril Neso

Magnetic fixing

Neso allows the integration of lighting in any type of architecture. The luminaires are attached to the rail by means of magnets. This makes it very easy to change their position. Imagination and creativity to power!

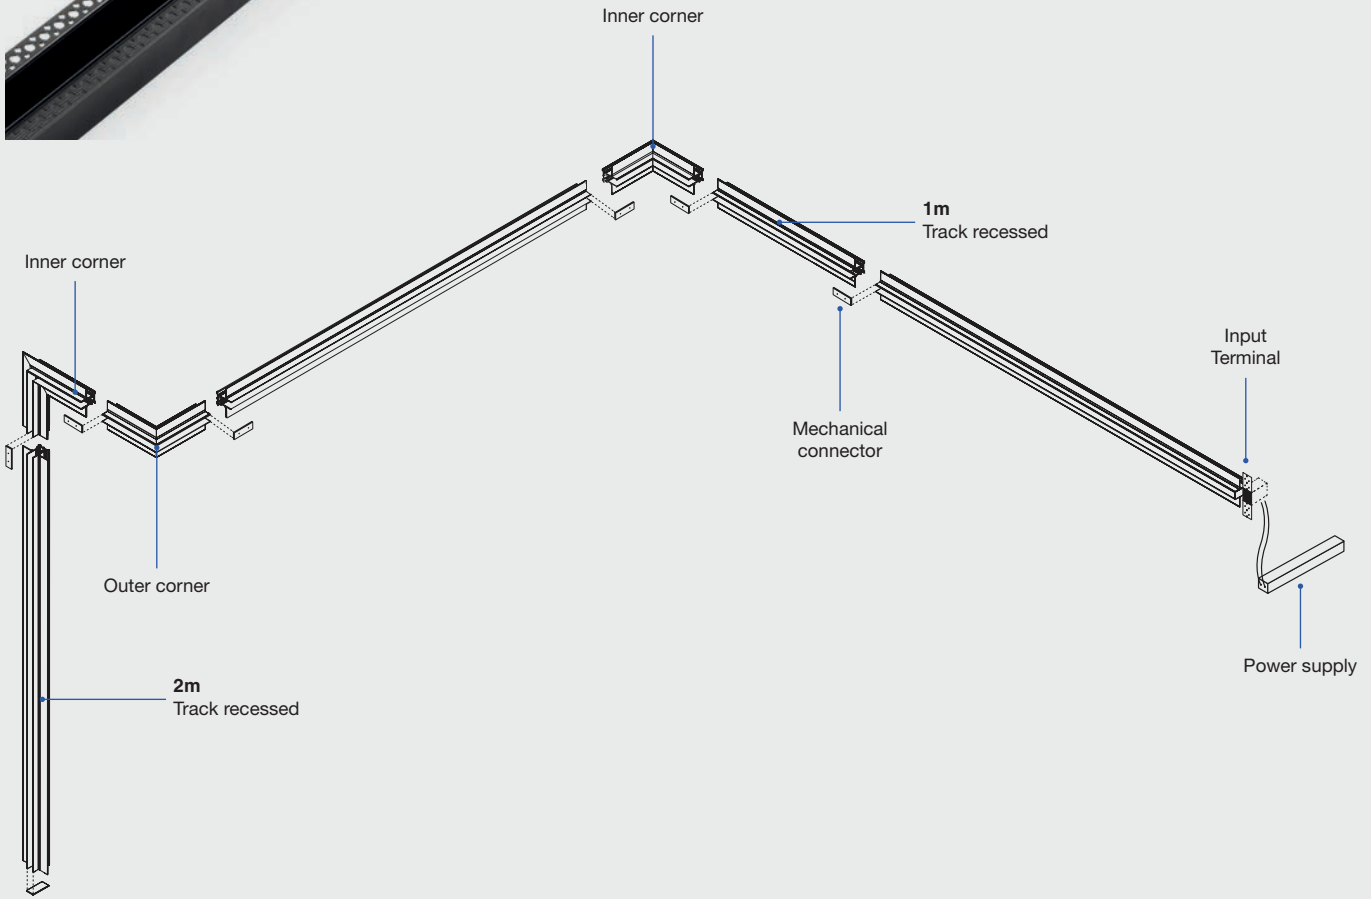

Neso permite la integración de la iluminación en cualquier tipo de arquitectura. las luminarias se fijan al carril mediante imanes. Esto hace que sea muy fácil cambiarlas de posición. ¡Imaginación y creatividad al poder!

Fonovia

Fonovia is a concept of linear light that isolates us from the environment, creating moments of concentration thanks to its fabric with sound-absorbing properties that in turn softens the light creating spaces of well-being. It accompanies moments of concentration and privacy. Fabric that favours acoustic absorption. Ideal for crowded spaces and meeting rooms.

FAN

Size it to your space

El tamaño del espacio

Size is really important when selecting your ceiling fan. If a fan is too large, it can overwhelm the space. On the flip side, if the fan is too small, the airflow may be inadequate for that area.

El tamaño es realmente importante al seleccionar el ventilador de techo. Si un ventilador es demasiado grande, puede saturar el espacio. Por otro lado, si el ventilador es demasiado pequeño, el flujo de aire puede ser inadecuado para esa área.

Recessed Drainage / Drenaje empotrables

EN	ES	FR	ITA
<p>Placing sunken lighting in the ground All sunken lights are ready for installing in the ground or in cement. Always ensure that they are not placed in watercourses or depressions in the ground. Position the mounting box surrounded by the fastening material to ensure that it does not tip or fall over. There must be a layer of gravel below and around the mounting box for draining purposes (see drawing). Correct drainage should allow 5 litres of water to be absorbed within 8 minutes. The glass can reach high temperatures, so contact with people and objects should be avoided. We recommend that the outside of the apparatus be cleaned regularly to stop foreign materials from preventing the dissipation of heat which leads to changes in the components and a loss of watertightness. Follow the installation and assembly instructions and maintenance recommendations very carefully.</p> <p>Condensation To minimise possible condensation inside the device, turn it on for 1 hour without the protective glass, closing it immediately once this time has elapsed.</p> <p>BEACONS To ensure the proper conservations of beacons we recommend their installation on a plinth, never directly onto the ground or lawn.</p>	<p>Colocación del empotrable en el terreno Todos los empotrables están previstos para una instalación en tierra o en cemento. Evite siempre colocarlo en vaguadas o depresiones del terreno. Coloque la caja de empotrar rodeada de material de sujeción para evitar que se incline o se hunda. Por debajo y alrededor de la caja de empotrar debe existir una capa de grava para drenaje (ver dibujo). Un drenaje correcto debe permitir la absorción de 5 litros de agua en 8 minutos. El cristal puede alcanzar temperaturas elevadas por lo tanto evite el contacto con personas o cosas. Es aconsejable limpiar frecuentemente el exterior del aparato para evitar así que materiales extraños impidan la disipación del calor con la consiguiente alteración de los componentes y pérdida de estanqueidad. Siga detenidamente las instrucciones de instalación y montaje así como las recomendaciones de mantenimiento.</p> <p>Condensación Para minimizar la posible condensación de vapor de agua dentro del aparato, debe hacerse funcionar durante 1 hora sin el cristal de protección, transcurrido ese periodo de tiempo, ciérralo inmediatamente.</p> <p>BALIZAS Para una correcta conservación de las balizas, recomendamos su aplicación sobre una pilastra a un nivel superior, y nunca sobre tierras o césped.</p>	<p>Installation de l'encastrable sur le terrain Tous les luminaires encastrables sont prévus pour une installation dans la terre ou le ciment. Évitez toujours de les installer dans des lignes de creux ou des dépressions du terrain. Installer le boîtier d'encastrement avec ses supports afin d'éviter qu'il ne soit incliné ni trop enfoncé. Sous le boîtier d'encastrement et autour de celui-ci, il doit y avoir une couche de gravier pour le drainage (voir dessin). Un drainage correct doit permettre l'absorption de 5 litres d'eau en 8 minutes. Le verre peut atteindre des températures élevées, évitez par conséquent tout contact avec les personnes ou des objets. Il est conseillé de nettoyer fréquemment l'extérieur de l'appareil, afin d'éviter que des corps étrangers n'empêchent la dissipation de la chaleur puis l'altération des composants et la perte d'étanchéité. Suivez attentivement les instructions d'installation et de montage, ainsi que les recommandations de maintenance.</p> <p>Condensation Pour minimiser les risques de condensation de la vapeur d'eau intérieur de l'appareil doit être exploité pendant une heure sans le verre de protection, après cette période temps, fermer immédiatement.</p> <p>BALISES Pour un bon maintenance de balises, nous recommandons son application sur un pilier à un niveau supérieur, et jamais sur terre ou sur l'herbe.</p>	<p>Collocazione dell'incasso nel terreno Tutti gli incassi sono pensati per la collocazione in terra o cemento. Evitare sempre di installarli in zone umide o depressioni del cemento. Installare sempre l'incasso circondato da materiale d'appoggio, per evitare che si inclini o affondi. Sotto ed intorno all'incasso deve sempre esserci sabbia drenante (disegno). Un drenaggio efficace deve permettere l'assorbimento di 5 litri d'acqua in 8 minuti. Il vetro può raggiungere temperature elevate, per tanto evitare il contatto con persone o cose. Si consiglia di pulire frequentemente l'esterno degli apparati per evitare che corpi estranei impidano la dissipazione del calore con conseguente alterazione dei componente e perdita delle stagnezza. Seguire attentamente le indicazioni di installazione e montaggio, così come le norme di manutenzione.</p> <p>Condensazione Per evitare la possibile condensazione di vapore acqueo all'interno dell'apparato, deve porsi in funzione durante una ora senza il cristallo di protezione e poi procedere alla chiusura immediatamente.</p> <p>PALETTI Per una corretta conservazione dei paletti raccomandiamo la sua applicazione su di una base ad un livello più alto, mai su terra o erba.</p>
<p>! In order to validate the warranty the external connection must have always the protection index (IP) with an equal or a superior value of the ip shown on the lamp.</p>	<p>! Para poder hacer uso de la garantía es imprescindible que la conexión externa sea de un índice de protección (IP) igual o superior a la luminaria adquirida.</p>	<p>! Stainless Steel / Acero inoxidable

EN	ES	FR	ITA
<p>Cleaning and maintenance of stainless steel It is advisable to follow the recommendations listed below for the correct maintenance and upkeep of all products manufactured from stainless steel In industrial or coastal areas localized corrosion can be caused by the accumulation of contaminants carried by the air. By using a cloth or duster will insure the elimination of these contaminants. In the case dirt which is more difficult to remove, it is recommended the use of a cleaner which includes phosphoric acid, ensuring that a scrubber or soft nylon brush is used, never use a steel scrubber. It is recommendable to clean stainless steel every 6 to 12 months for average dirt and every 3 months for more severe cases. Especially in the following atmospheric conditions - Marine atmospheres. - Atmospheres which contain a lot of industrial contaminants. - Atmospheric and traffic pollution.</p>	<p>Limpieza y mantenimiento del acero inoxidable Le aconsejamos que siga las siguientes recomendaciones para la conservación y mantenimiento de todos aquellos artículos fabricados en acero inoxidable. En zonas industriales o costeras se pueden producir corrosiones localizadas por acumulaciones de contaminantes llevados por el aire, asegúrese que se eliminan dichos contaminantes utilizando un paño húmedo o una gamuza. En caso de suciedad más difícil le recomendamos que utilice un limpiador que incluya ácido fosfórico siempre con el uso de estropajos o cepillos suaves de nylon, nunca usar estropajos de acero. La frecuencia de limpieza que le recomendamos para una suciedad moderada es de 6-12 meses y de 3 meses cuando es más abundantes. Especialmente en ambientes que recojan las siguientes condiciones: - Átmósferas marinas. - Ambientes cargados de contaminantes industriales., - Suciedad atmosférica y del tráfico.</p>	<p>Nettoyage et entretien de l'acier inoxydable Nous vous conseillons de suivre les suggestions pour la conservation et entretien de tous les articles fabriqués en acier inoxydable. Dans les zones industrielles ou proches au littoral, il peut s'y produire des corrosions localisées par l'accumulation de contaminants apportés par l'air, assurez-vous que ces contaminants puissent s'éliminer avec un torchon humide ou une peau de chamois. En cas de saleté plus difficile, nous vous conseillons d'utiliser un nettoyeur à base d'acide phosphorique, toujours à utiliser avec des tampons à récurer ou des brosses douces en nylon, ne jamais utiliser de tampons à récurer en acier. La fréquence de nettoyage que nous vous conseillons pour une saleté modérée est de 6 à 12 mois et de 3 mois quand celle-ci est plus abondante. Surtout dans les ambiances avec les conditions suivantes: - Atmosphères marines. - Ambiances chargées de contaminants industriels. - Saleté atmosphérique et de circulation.</p>	<p>Pulizia e manutenzione dell'acciaio inossidabile Consigliamo di seguire le raccomandazioni per la conservazione e manutenzione di tutti quei prodotti fabbricati in acciaio inossidabile. In zone industriali o costiere si possono produrre corrosioni localizzate a causa dei contaminanti presenti nell'aria; suddette corrosioni si possono eliminare utilizzando un panno umido o di camoscio. In caso di sporcizia più difficile raccomandiamo l'utilizzo di acido fosforico come prodotto di pulizia e manutenzione (utilizzando spugnette, panni soffici o spazzole di nylon). La frequenza raccomandata è: 6-12 mesi per una sporcizia moderata, 3 mesi per le più difficili. Ambienti critici: - Atmosfera marina - Ambienti carichi di contaminanti industriali - Atmosfere cittadine con elevato indice di traffico.</p>
